Fred,

After the initial minor teething troubles with the Zamil 10, which have now been solved, we would like to congratulate Zamil on the successful design and concept of this class of vessel, which was built in Dammam, at Zamil Shipyard.

This vessel has now been used on several Rig Moves and it has proved to be most superior AHTSS Vessel we, as Aramco, have operating in our area. Three separate Rig Move Masters have commented on the vessel, and how good it was to have such an outstanding vessel for our Rig Moves after all this time. As you know from long experience, Rig Move Masters are not easily pleased.

When observed maneuvering at rigs in a supply mode, the ability of this vessel to maneuver and maintain position vastly outclasses all other vessels we have in our present operation.

We look forward to the next vessels of this class arriving, and hope that you convey our appreciation of these vessels to all concerned with the design, concept, financing and building of the vessel. It really is what we have been looking for all those years.

ZOMCO really have a vessel they can be proud of.

**D J Bremner, Rig Move Master,
Northern Area Marine Operations Division**
